Office Action Summary

Application No.

10/748,898

Applicant(s)

RHOADES

Examiner

Paul B. Yanchus

Art Unit

2116

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 August 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 and 18-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 4 is/are allowed.
- 6) ☒ Claim(s) 1-3, 5-14 and 18-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

This final office action is in response to communications filed on 8/4/06.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 5 and 18-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over O'Connor, US Reissued Patent no. RE38,762, in view of Cromer et al., US Patent no. 6,381,636 [Cromer].

Regarding claim 1, O'Connor discloses a method for customizing a computer system, comprising the steps of:

receiving a customer order, wherein the customer order specifies customization information for a computer system [column 4, lines 53];

programming customization parameters into a configuration mechanism [CD-ROM], wherein the configuration parameters corresponding to the customization information [column 5, lines 20-34];

sending the configuration mechanism to a customer [column 6, lines 1-4]; and

sending a computer system to the customer, the computer system being adapted to receive the configuration mechanism and to customize the computer system according to the

configuration parameters stored in the configuration mechanism [column 5, lines 42-50 and column 6, lines 1-4].

O'Connor does not disclose that a system administrator may manage the computer if the computer system is turned off. Cromer discloses a server that is capable accessing information in a remote client computer system which is turned off [column 3, lines 24-30]. It would have been obvious to one of ordinary skill in the art to modify the O'Connor system to include the ability to access the computer system even though it is turned off in order to eliminate the need for a user to be present at the computer system during the customization.

Regarding claim 2, O'Connor discloses providing instructions to the customer to install the configuration mechanism in the computer system [documentation, column 4, line 65 – column 6, line 4].

Regarding claim 3, O'Connor discloses providing instructions to the customer to initiate a boot process [documentation, column 4, line 65 – column 6, line 4] wherein, in response to the initiation of a boot process, the computer system customizes an operating system according to the configuration parameters stored in the configuration mechanism [column 6, lines 36-49].

Regarding claim 5, O'Connor discloses that the configuration mechanism is included in an adapter pluggable into the computer system, the adapter including a communications port [CD-ROM reader is inherently included with computer system in order to read CD-ROM used to configure the software of the computer system], further comprising the steps of:

storing the customization information, as specified in the order [hardware components and software components specified in the customer order], in a memory [order entry computer system, column 4, lines 43-60];

converting the customization information stored in the memory to customization parameters [hardware list and software list, column 4, lines 43-60]; and

loading the customization parameters from the memory to the configuration mechanism via the communications port of the adapter [column 5, lines 20-34].

Regarding claims 18 and 19, O'Connor and Cromer do not disclose that the configuration mechanism monitors the computer system components for potential problems and alerting a system administrator of events that could impact system operation. However, monitoring system components for problems and reporting potential problems to a system administrator is well known in the art. It would have been obvious to one of ordinary skill in the art to modify the O'Connor and Cromer system to include monitoring system components for problems and reporting potential problems to a system administrator in order to increase system reliability.

Regarding claim 20 and 22, O'Connor and Cromer do not disclose that the computer system is provided with a preconfigured operating system. However, providing preconfigured operating systems in new computer systems is well known in the art. It would have been obvious to one of ordinary skill in the art to modify the O'Connor and Cromer to provide a preconfigured operating system in order to relieve the customer of the burden of installing and configuring an operating system.

Regarding claim 21, O'Connor and Cromer do not disclose configuring one of a computer name, host IP address, host gateway or host subnet. However, those parameters are well known configurable parameters and it would have been obvious to one of ordinary skill in the art to allow the O'Connor and Cromer system to configure the well known configurable parameters.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Paul, US Patent no. 5,991, 875, in view of Cromer et al., US Patent no. 6,381,636 [Cromer].

Paul discloses a method for customizing a computer system comprising:

- (a) storing customization information for the computer system in a configuration mechanism [configuration card, column 3, lines 37-45];
- (b) coupling the configuration mechanism to the computer system [column 4, lines 1-6];
- and
- (c) retrieving the customization information in the configuration mechanism by the computer system to customize the computer system [column 3, lines 28-35 and column 4, lines 20-25].

Paul does not disclose that a system administrator may manage the computer if the computer system is turned off. Cromer discloses a server that is capable accessing information in a remote client computer system which is turned off [column 3, lines 24-30]. It would have been obvious to one of ordinary skill in the art to modify the Paul to include the ability to access the computer system even though it is turned off in order to eliminate the need for a user to be present at the computer system during the customization.

Claims 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paul, US Patent no. 5,991, 875 and Cepulis, US Patent no. 6,961,791, in view of Cromer et al., US Patent no. 6,381,636 [Cromer].

Regarding claims 7 and 8, Paul, as described above, discloses a configuration mechanism, which is configured to be plugged into a computer system, that stores customization information for the computer system. Paul does not disclose that the configuration mechanism is a PCI adapter. However, as shown by Cepulis, PCI adapters for storing configuration information for a computer system are well known in the art [column 2, lines 28-33 and column 3, lines 55-67]. It would have been obvious to one of ordinary skill in the art to implement the Paul configuration mechanism as a well known PCI adapter to increase the compatibility of the system. One of ordinary skill in the art would be motivated to implement the Paul configuration mechanism as a well known PCI adapter to increase the compatibility of the system by enabling the configuration mechanism to be used with any computer systems that include the well known PCI bus architecture.

Regarding claim 9, Paul discloses that the configuration mechanism may be manually programmed with the customization information at a distribution site [column 5, lines 2-5].

Regarding claim 10, Paul discloses that the configuration mechanism includes at least one communication port [communications interface, column 3, lines 37-41].

Regarding claim 11, Paul and Cepulis are silent as to how the customization information is downloaded to the configuration mechanism. However, in order for the configuration information to be stored on the card the configuration information must be downloaded to the configuration mechanism from some sort of server device. Therefore, the configuration information in the Paul and Cepulis system is inherently downloaded from a server to the configuration mechanism via a communication port.

Regarding claim 12, Paul and Cepulis are silent as to how the configuration mechanism and computer system are shipped. However, it is well known in the art that computer readable storage devices may be damaged when they are attached to the computer system during shipping of the computer system. Therefore, it would have been obvious to one of ordinary skill in the art to ship the configuration mechanism and computer system separately to prevent damage to the configuration mechanism and/or computer system during shipping.

Regarding claim 13, Paul discloses performing a first system boot and querying the configuration mechanism for the customization information [column 4, lines 41-54].

Regarding claim 14, Paul further discloses that the coupling is performed at the customer site and that the retrieving step is performed during a first system boot [column 3, lines 28-35 and column 4, lines 20-25].

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 6-12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of copending Application No. 10/748,937, in view of Cromer et al., US Patent no. 6,381,636 [Cromer]. Although the conflicting claims are not identical, they are not patentably distinct from each other. Claims 1-6 of copending Application No. 10/748,937 teach all of the limitations of claims 6-12 of the present application except for “allowing a system administrator to manage the computer system remotely independent of an on or off status of the computer system.” Cromer discloses a server that is capable accessing information in a remote client computer system that is turned off [column 3, lines 24-30]. It would have been obvious to one of ordinary skill in the art to modify the teachings of claims 1-6 of copending Application No. 10/748,937 to include the ability to access the computer system even though it is turned off in order to eliminate the need for a user to be present at the computer system during the customization.

Claims 6-8, 10 and 11 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 6-9 of copending Application No. 10/748,630 in view of Cromer et al., US Patent no. 6,381,636 [Cromer]. Although the conflicting claims are not identical, they are not patentably distinct from each other. Claims 6-9 of copending Application No. 10/748,630 teach all of the limitations of claims 6-8, 10 and 11 of the present application except for “allowing a system administrator to manage the computer system remotely independent of an on or off status of the computer system.”

Cromer discloses a server that is capable accessing information in a remote client computer system that is turned off [column 3, lines 24-30]. It would have been obvious to one of ordinary skill in the art to modify the teachings of claims 6-9 of copending Application No. 10/748,630 to include the ability to access the computer system even though it is turned off in order to eliminate the need for a user to be present at the computer system during the customization.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

Claim 4 is allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul B. Yanchus whose telephone number is (571) 272-3678. The examiner can normally be reached on Mon-Thurs 8:00-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rehana Perveen can be reached on (571) 272-3676. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
